

# The Myth of Creation for Children

## Let there be Life

The last thing God created, was Life. God took His men, and spread it out over our universe. Then he died. Because of his sacrifice, Life is Sacred.

## We believe...

God made everything we see, under the sun. Not the same old world, but a new one. Not the same time, but a new history.

## Let there be Air

Due to all those planets and stars, holes formed in the water. After some time, there were more holes than water. God let the water cling to the rocks. The holes connected, forming spaces. There's lots of space now.

## Let there be Water

The first thing God created, was water. A lot of water. It flowed out, creating holes, where before, there was none.

## Let there be Earth

Inside the water, God had placed small clumps of soil. They clumped together into bigger clumps. These formed rocks, which formed planets. No life on a planet. It's called "Earth".

## Let there be Fire

More and more rocks clumped together. The clumps got very big and heavy. They cooled in and on light on fire. These were the first stars. Our sun is a star. The universe holds many, many stars.

## The Real is History

After a few billion years, we humans appear. We're significant to ourselves, but we pale in comparison to our universe. And there might be many more civilizations, before and after us, that we can't yet see.

## Let there be Life

The last thing God created, was Life. God took His men, and spread it out over our universe. Then he died. Because of his sacrifice, Life is Sacred.

## We believe...

God made everything we see, under the moon. Not the same old world, but a new one. Not the same time, but a new history.

## Let there be Air

Due to all those planets and stars, holes formed in the water. After some time, there were more holes than water. God let the water cling to the rocks. The holes connected, forming spaces. There's lots of space now.

## We believe...

God created everything we see.  
Maybe even more.

Not because God wanted to,  
but because God had no other choice.

It was Destiny.

# Let there be Water

The first thing God created, was water.

A lot of water.

If flowed out, creating Space,  
where before, there was none.

# Let there be Earth

Inside the water, God had placed small clumps of soil.

They clumped together into bigger clumps. Those formed rocks, which formed planets. We live on a planet. It's called "Earth".

## Let there be Fire

More and more rocks clumped together. The clumps got very big and heavy. They caved in and caught on fire. These were the first stars.

Our sun is a star.

The universe holds many, many stars.

# Let there be Air

Due to all those planets and stars, holes formed in the water.

After some time, there were more holes than water. And the water clung to the rocks.

The holes connected, forming space. There's lots of space, now.

# Let there be Life

The last thing God created, was Life.

God took his own, and spread it out over our universe. Then he died.

Because of this sacrifice, Life is Sacred.

# The Rest is History

After a few billion years, us humans appear.

We're significant to ourselves. But we pale in comparison to our universe.

And there might be many more universes... before ours, after it, alongside... that we can't yet see.

# The Myth of Creation for Children

## Let there be Life

The first thing God created, was Life.  
God took his own, and spread it out over our universe. Then he died.  
Because of this sacrifice, life is sacred.

## We believe...

God created everything by his own will, before time.  
He is eternal and unchanging, and he is not subject to other things.  
It was happy.

## Let there be Air

First he, all those planets and stars, holes formed in the water.

After some time, there were more holes than water, and the water clung to the rocks.

The holes connected, forming space. There's lots of space, now.

## Let there be Water

The first thing God created, was water.  
A lot of water.

If I spread out, creating space, where before, there was none.

## The Rock is History

After a few billion years, as humans appear.  
We're significant to ourselves. But we pale in comparison to our universe.

And there might be many more universes... before ours, after a, long while... that we can't yet see.

## Let there be Earth

Inside the water, God had placed small clumps of rock.

They clumped together into bigger clumps. These formed rocks, which formed planets. We live on a planet, it's called "Earth".

## Let there be Fire

Hotter and more rocks clumped together. The clumps got very big and heavy. They cooled in and caught on fire. These were the first stars.  
Our sun is a star.

The universe holds many, many stars.
